 institute

# WEAVE design

- ✦ WEAVE is a new spectrographic survey facility for the WHT
- ✦ The WHT has a 4.2m primary mirror with a prime focus f/ratio of f/2.8
- ✦ to match the typical observational conditions, we choose MOS fibres with 85  $\mu\text{m}$  diameters (1.3" on the sky)

# Prime focus corrector

with ADC (L2–L5)

L1 is 1100 mm

# PFC: rotator and mass dummy

# PFC: prime focus + dummy lenses

L2/L3 ADC element

Full corrector assembly now validated for assembly tolerances

# Fibre positioner system

2dF-style tumbler, two robots, ~1000 fibres/plate (plus 20 minIFUs on one plate)

Large IFU in red box

university of  
 groningen

 institute

# IFUs

- 20 miniIFUs on one positioner plate
- ~11"×12"

# IFUs

- 20 minIFUs on one positioner plate
  - $\sim 11'' \times 12''$
- Large IFU between plates
  - $1.3' \times 1.5'$
- IFU modes cannot be used simultaneously with MOS fibres

# LIFU assembly

...and the mIFU too!

# Spectrograph

designed in Dwingeloo by NOVA

# Spectrograph: (almost) current state

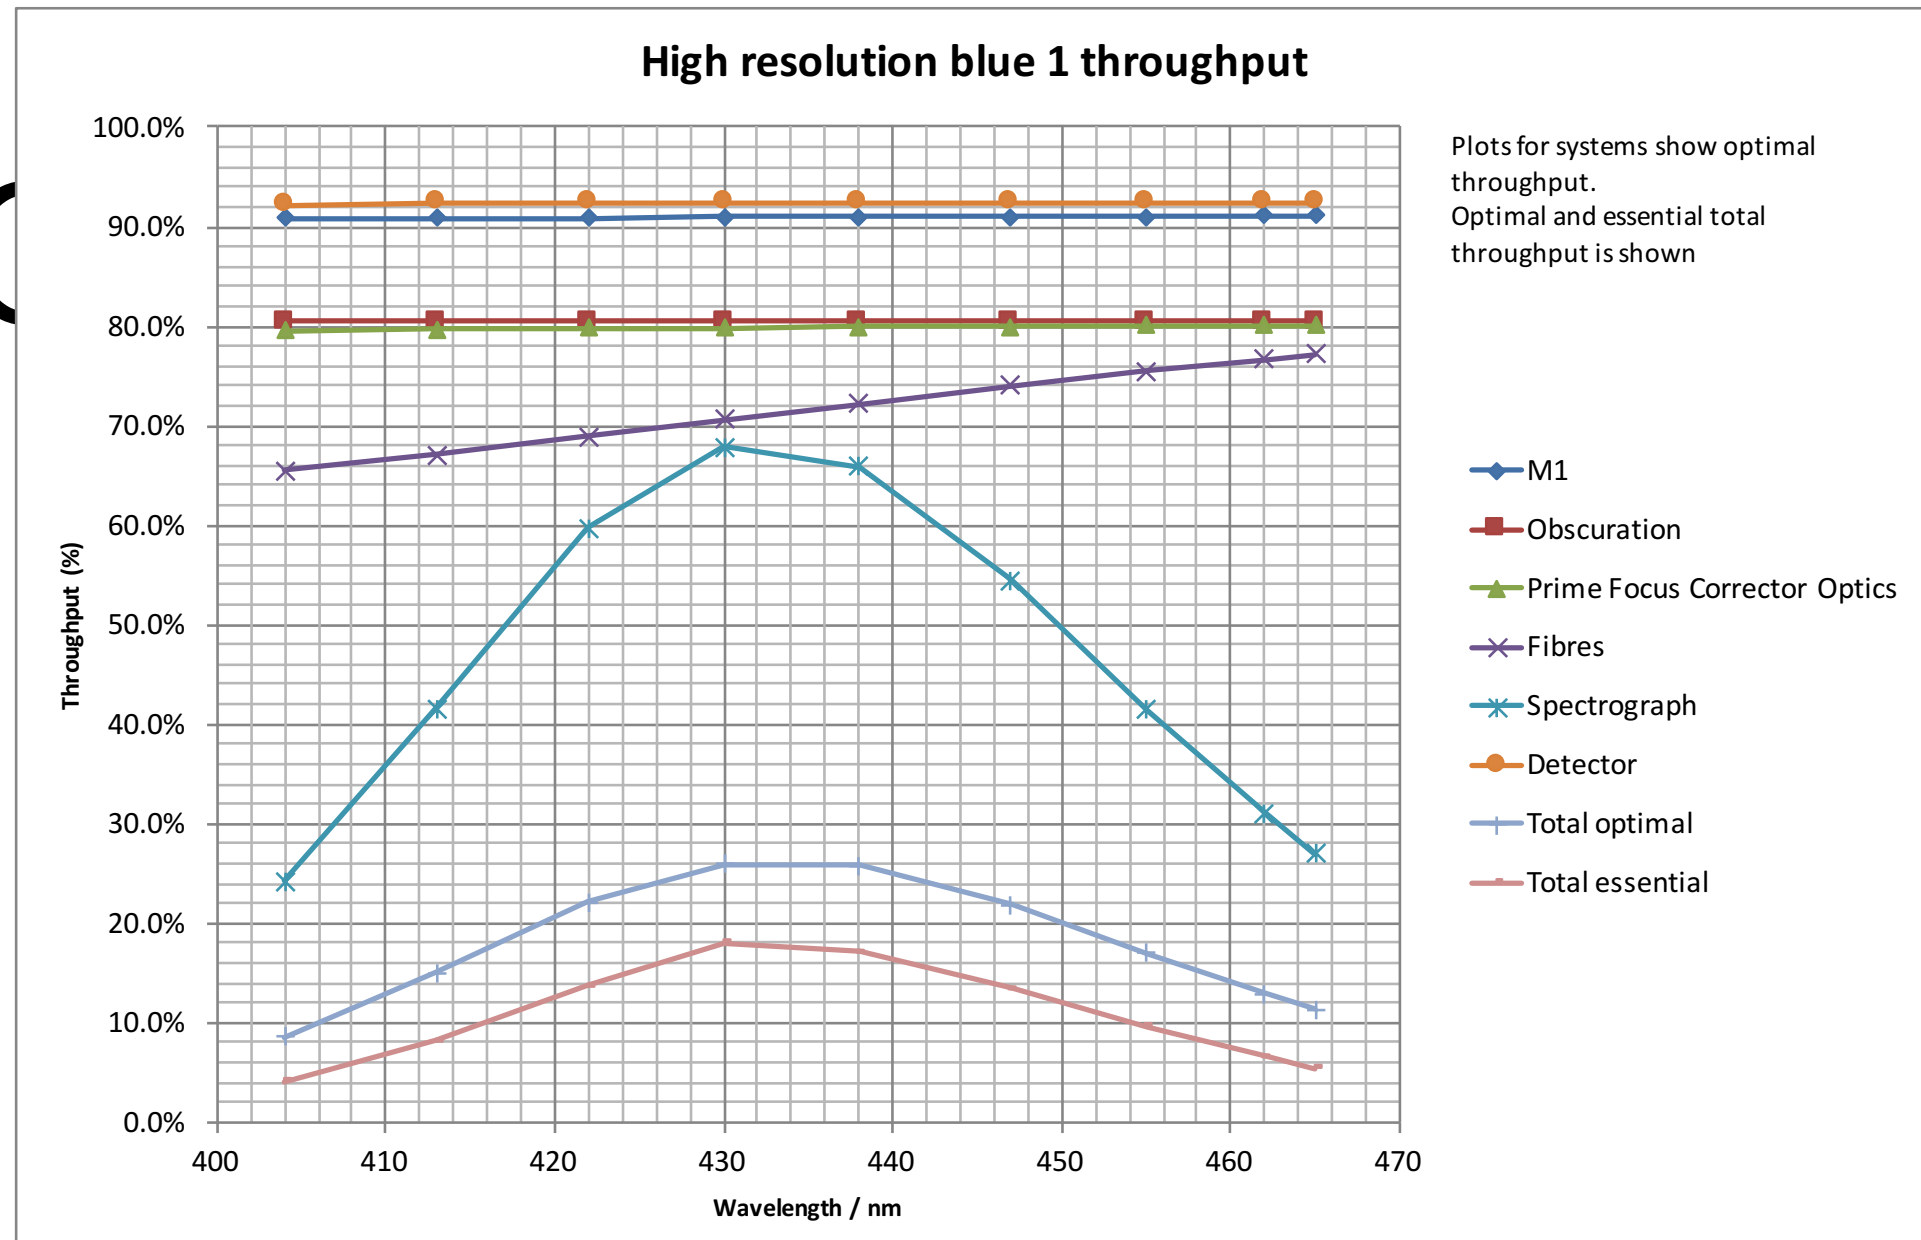

# Throughput (LR)

Peaks at 32% at 500 nm  
and 35% at 750 nm

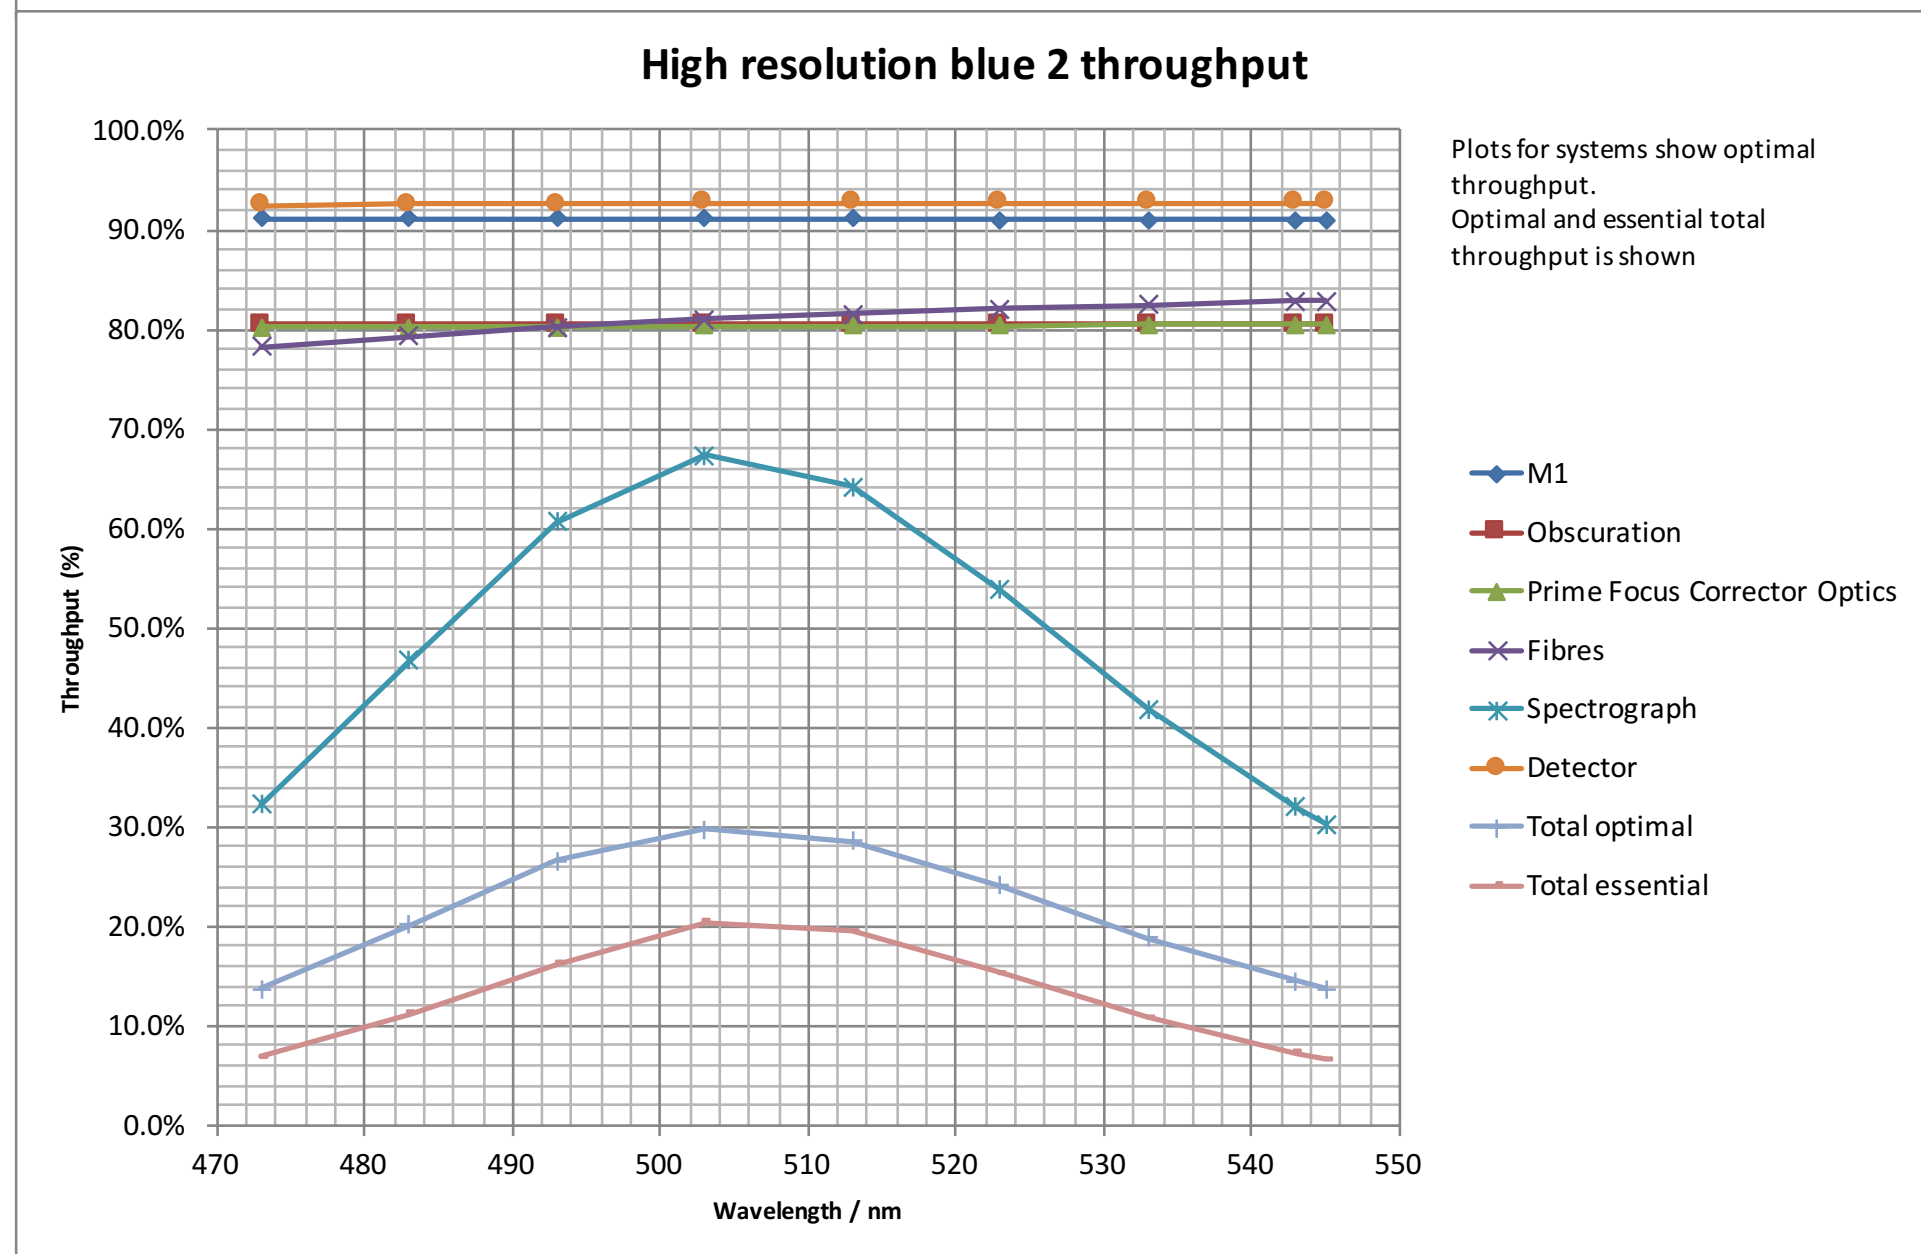

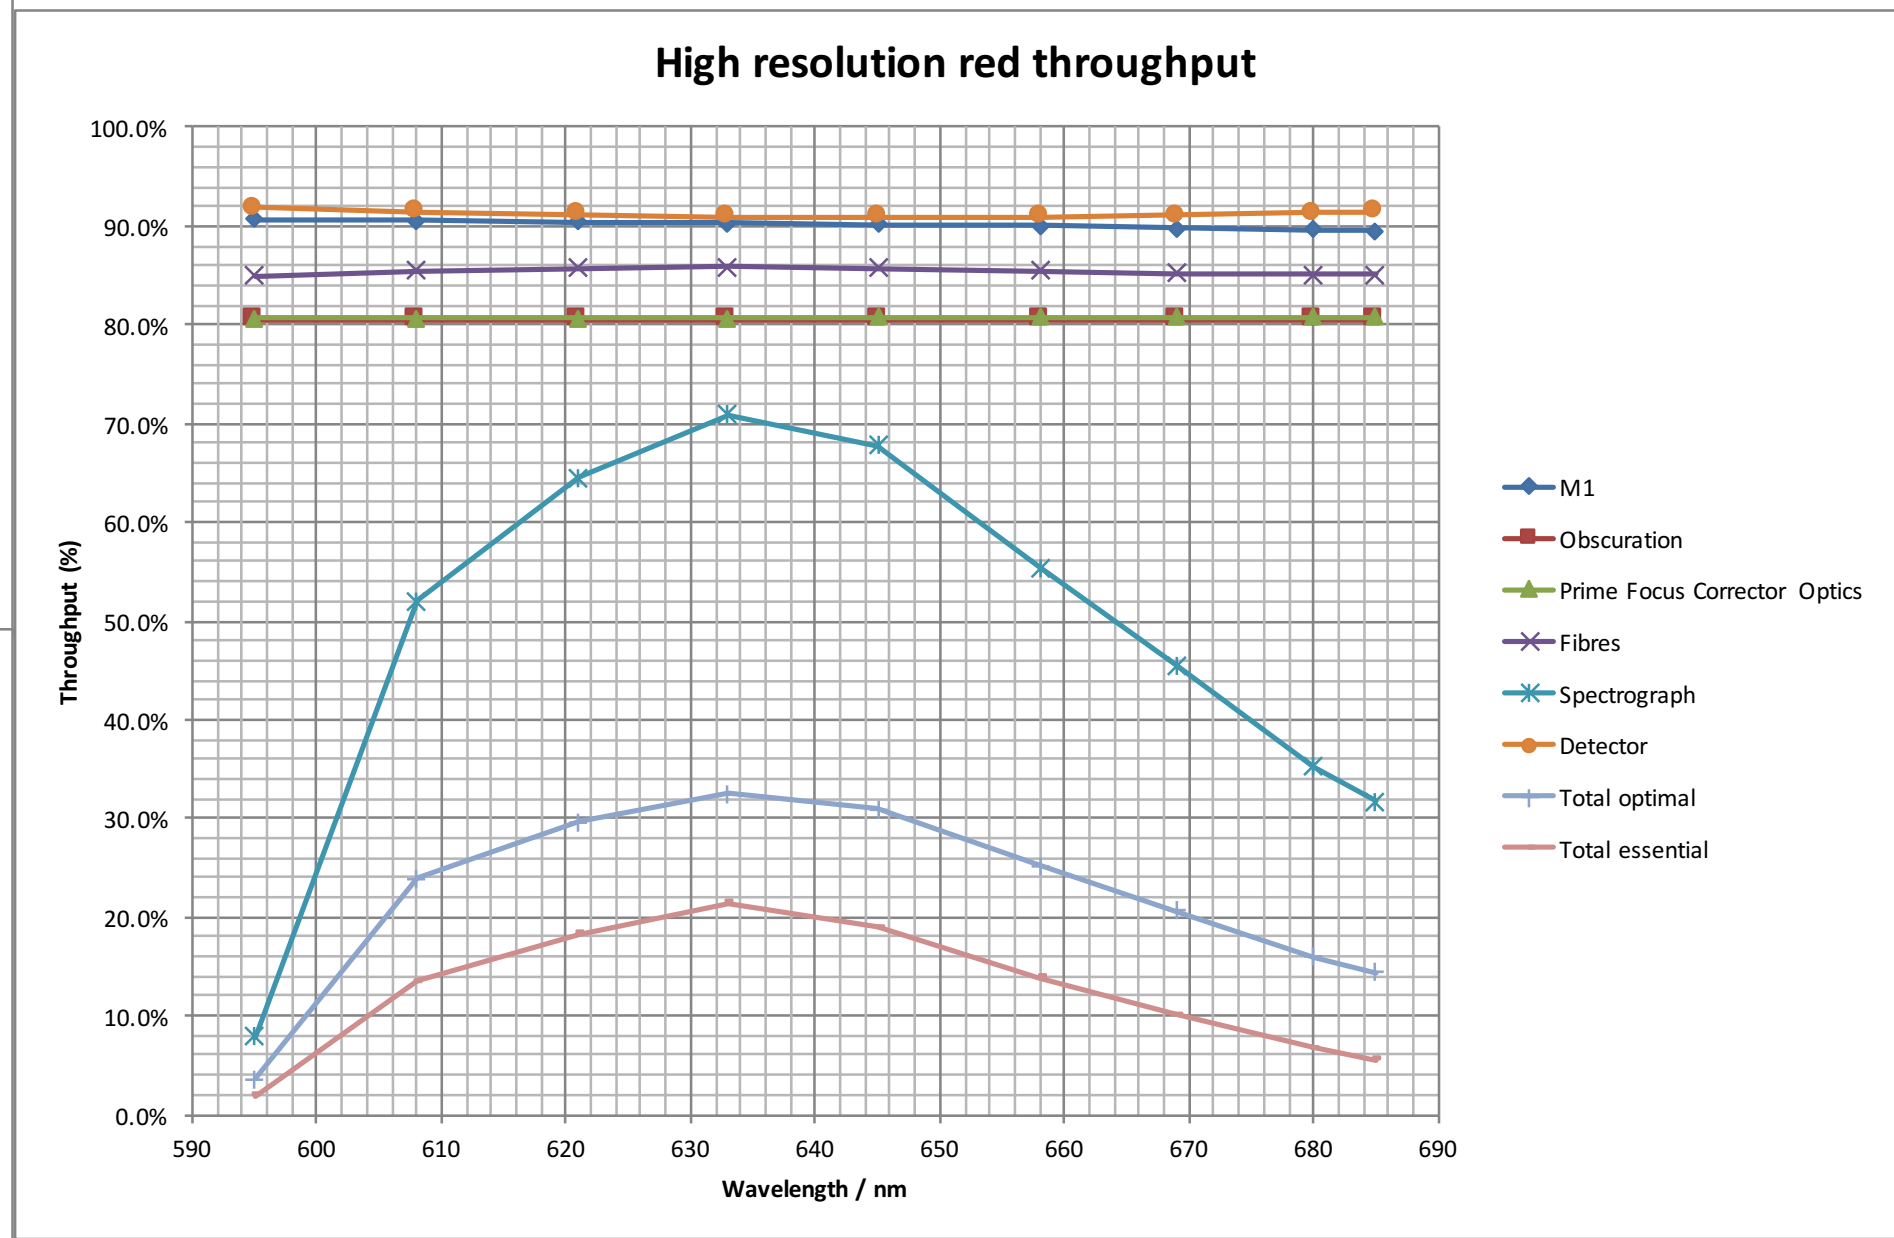

# Thro

Peaks at 26% at 4350 Å  
or 30% at 5050 Å and  
at 32% at 6350 Å

# Total estimated throughput (HR)

university of  
 groningen

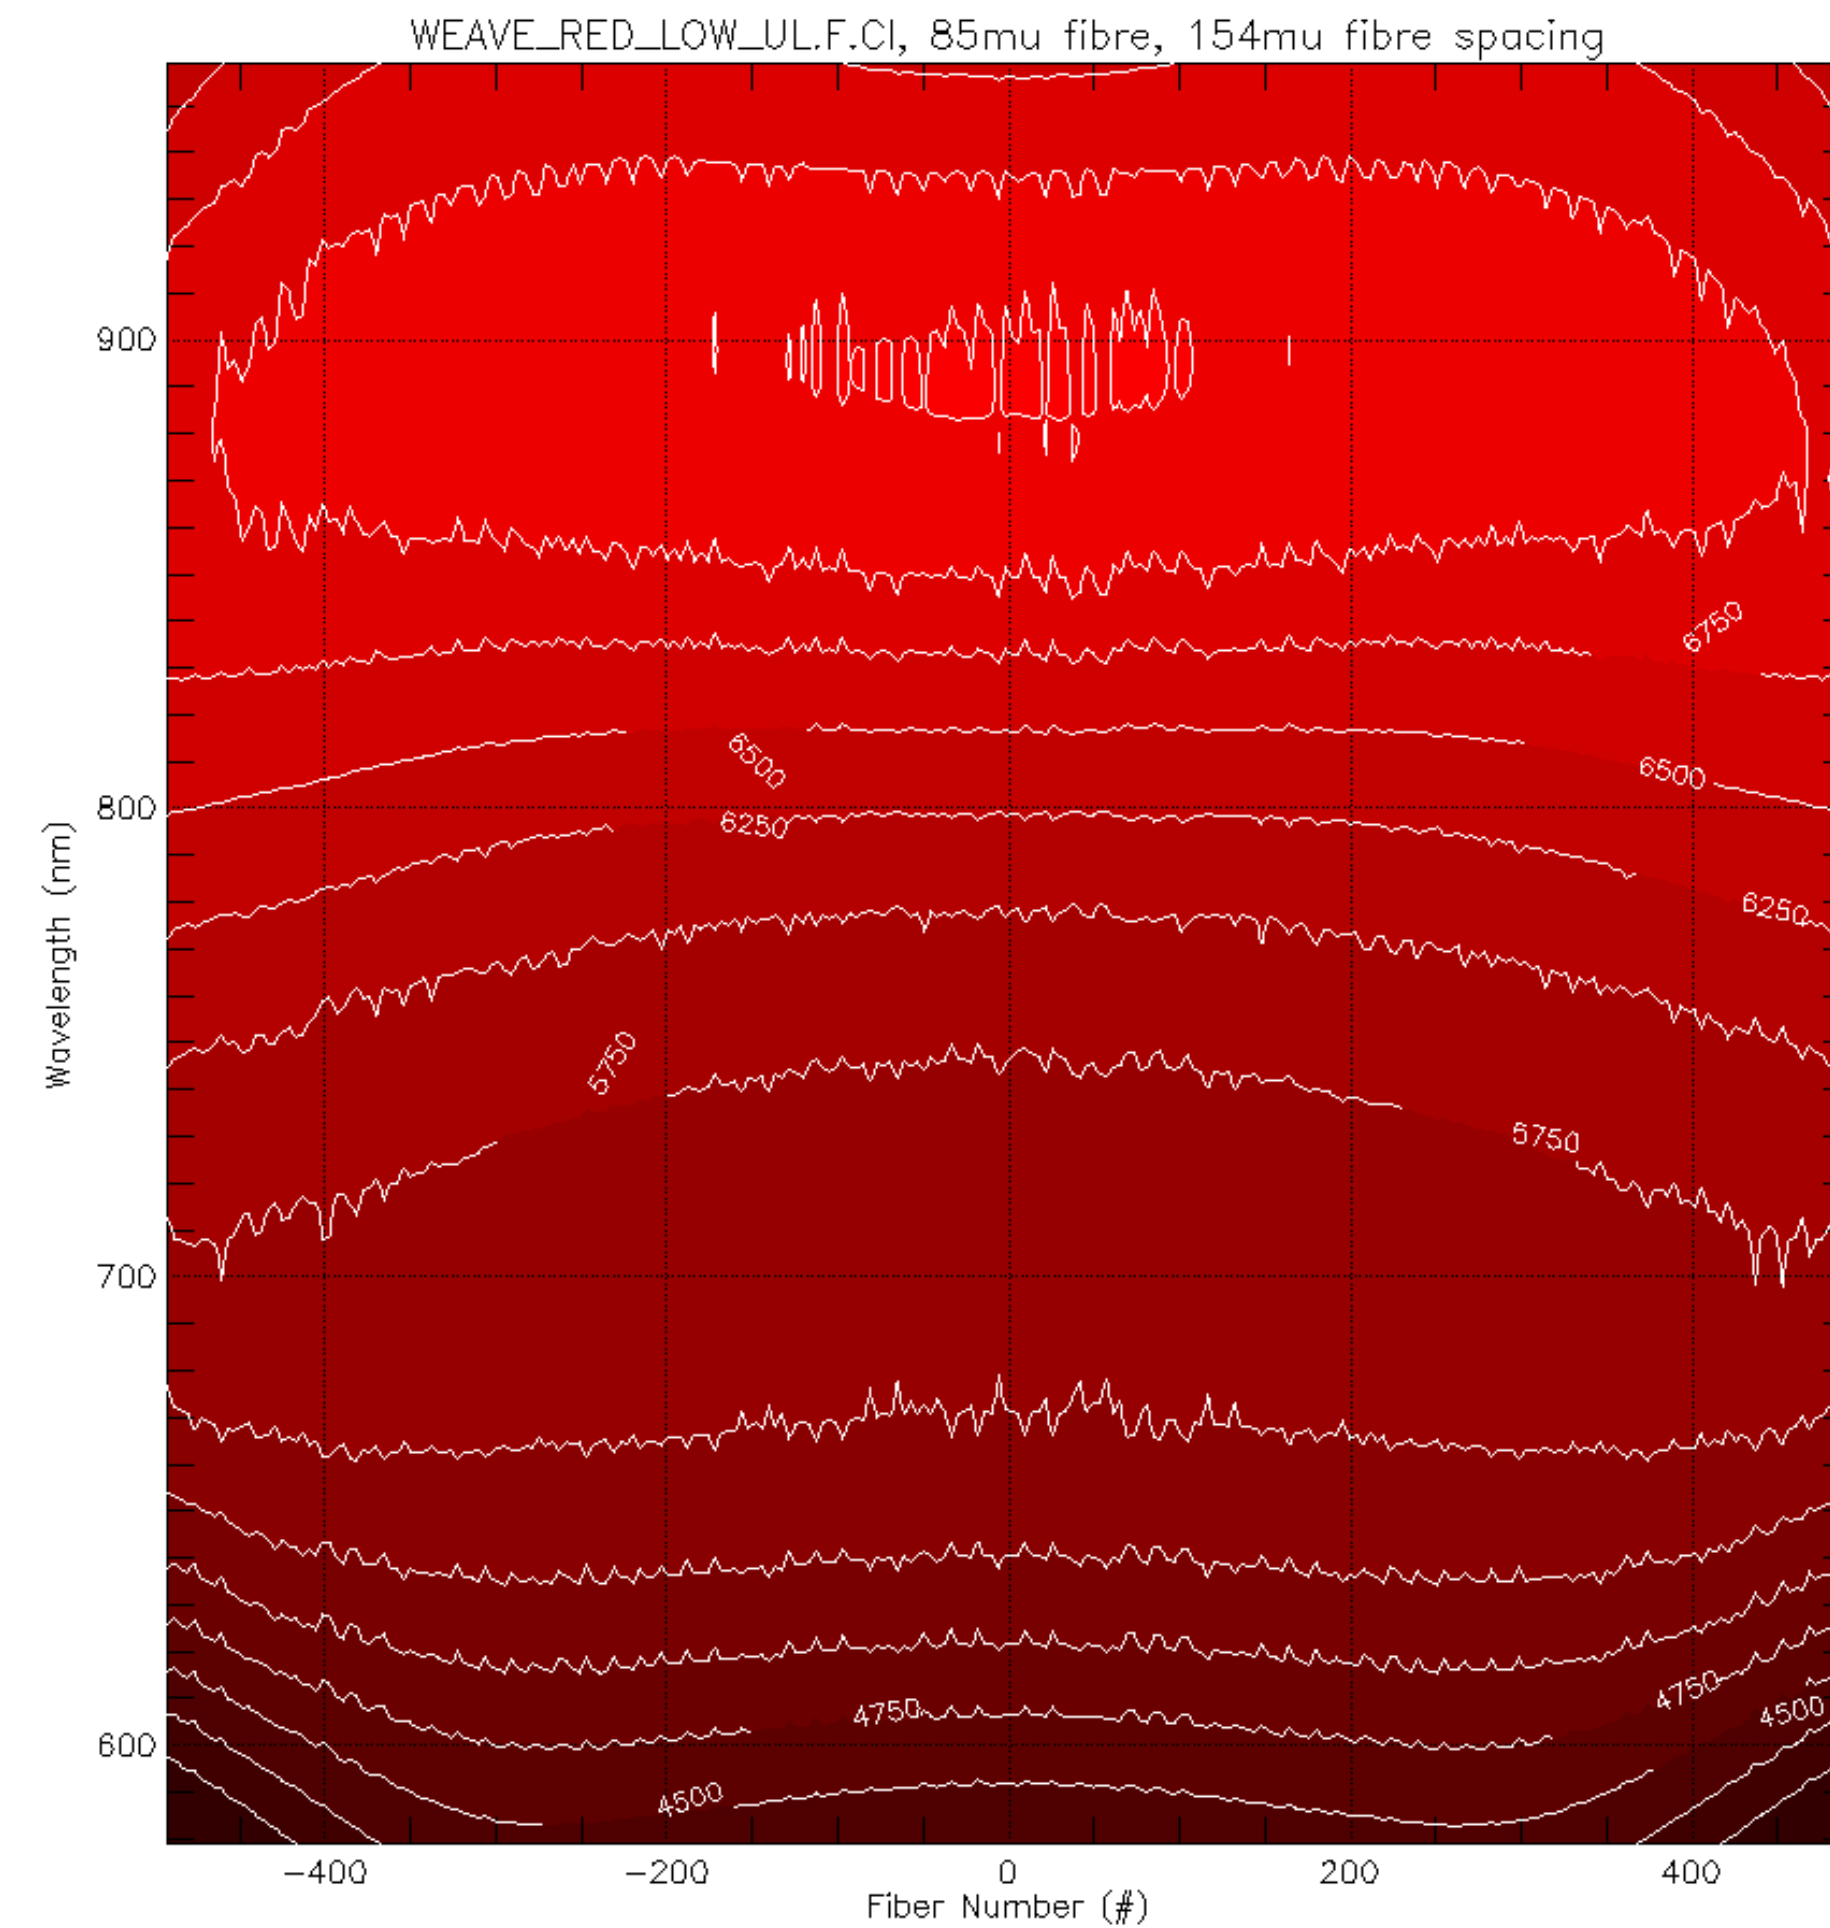

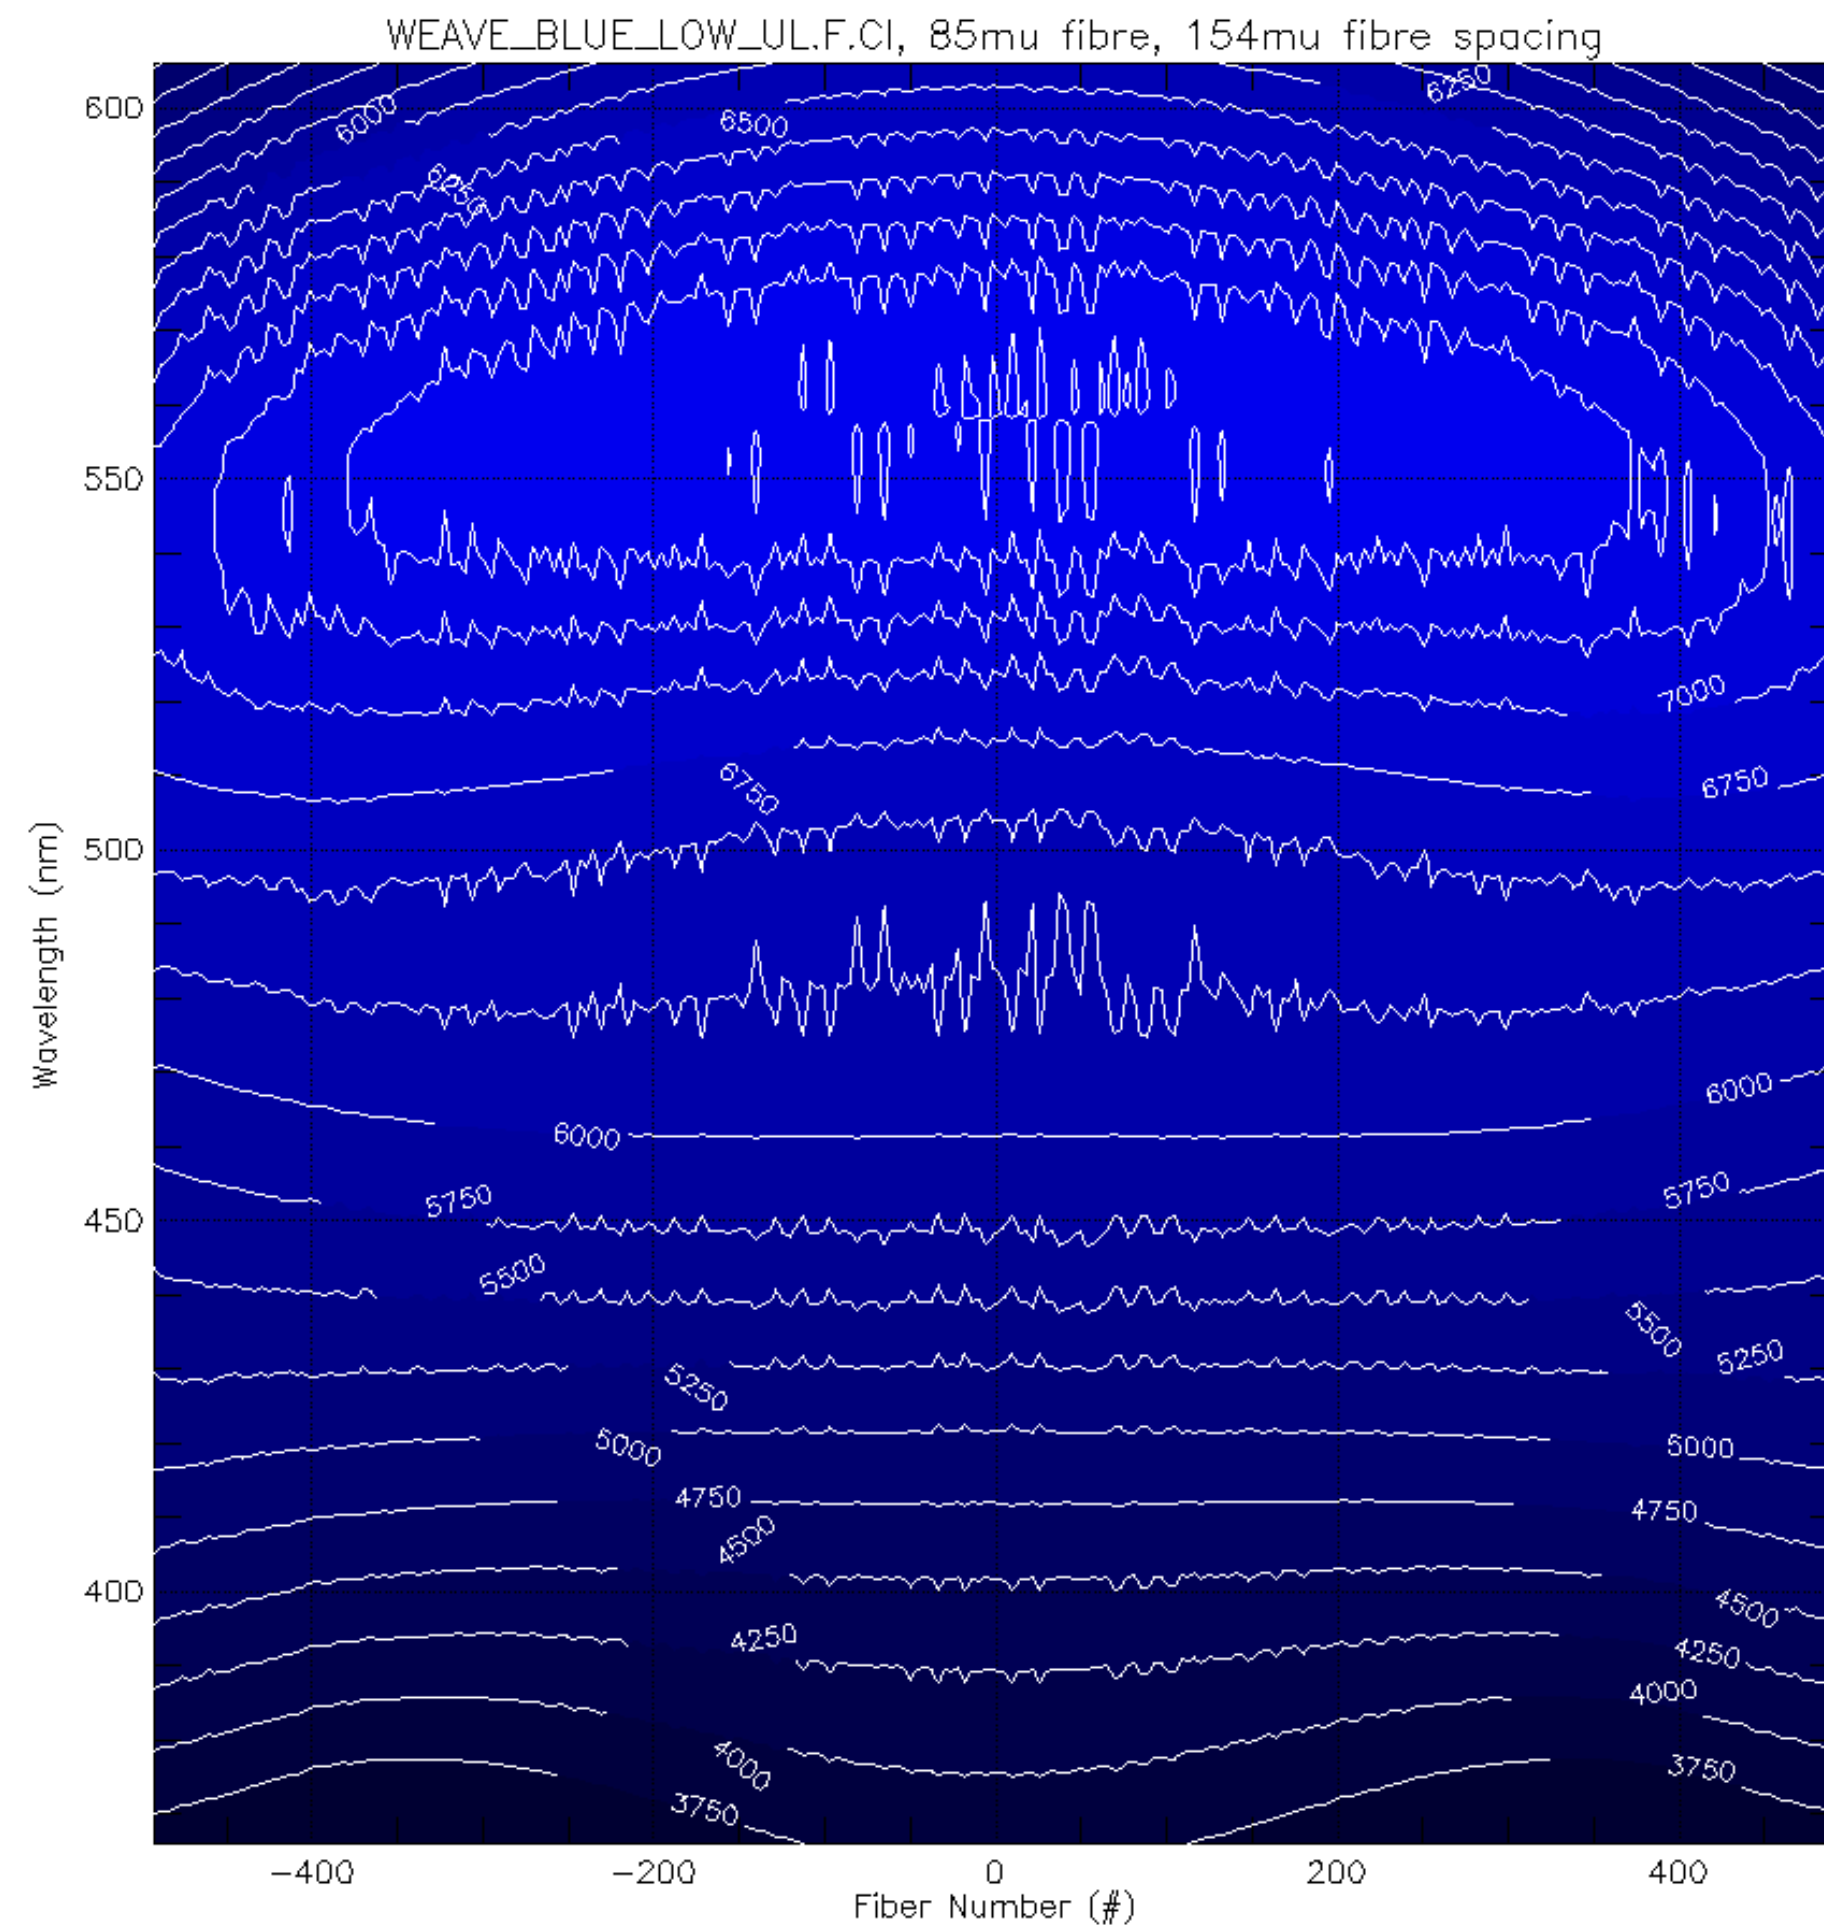

faculty of science  
 and engineering

kapteyn astronomical  
 institute

# Simulated spectral resolution: LR

$R = \lambda / \text{FWHM} \sim 3750 - 7500$

# Simulated spectral resolution: HR

$R = \lambda / \text{FWHM} \sim 15000 - 25500$

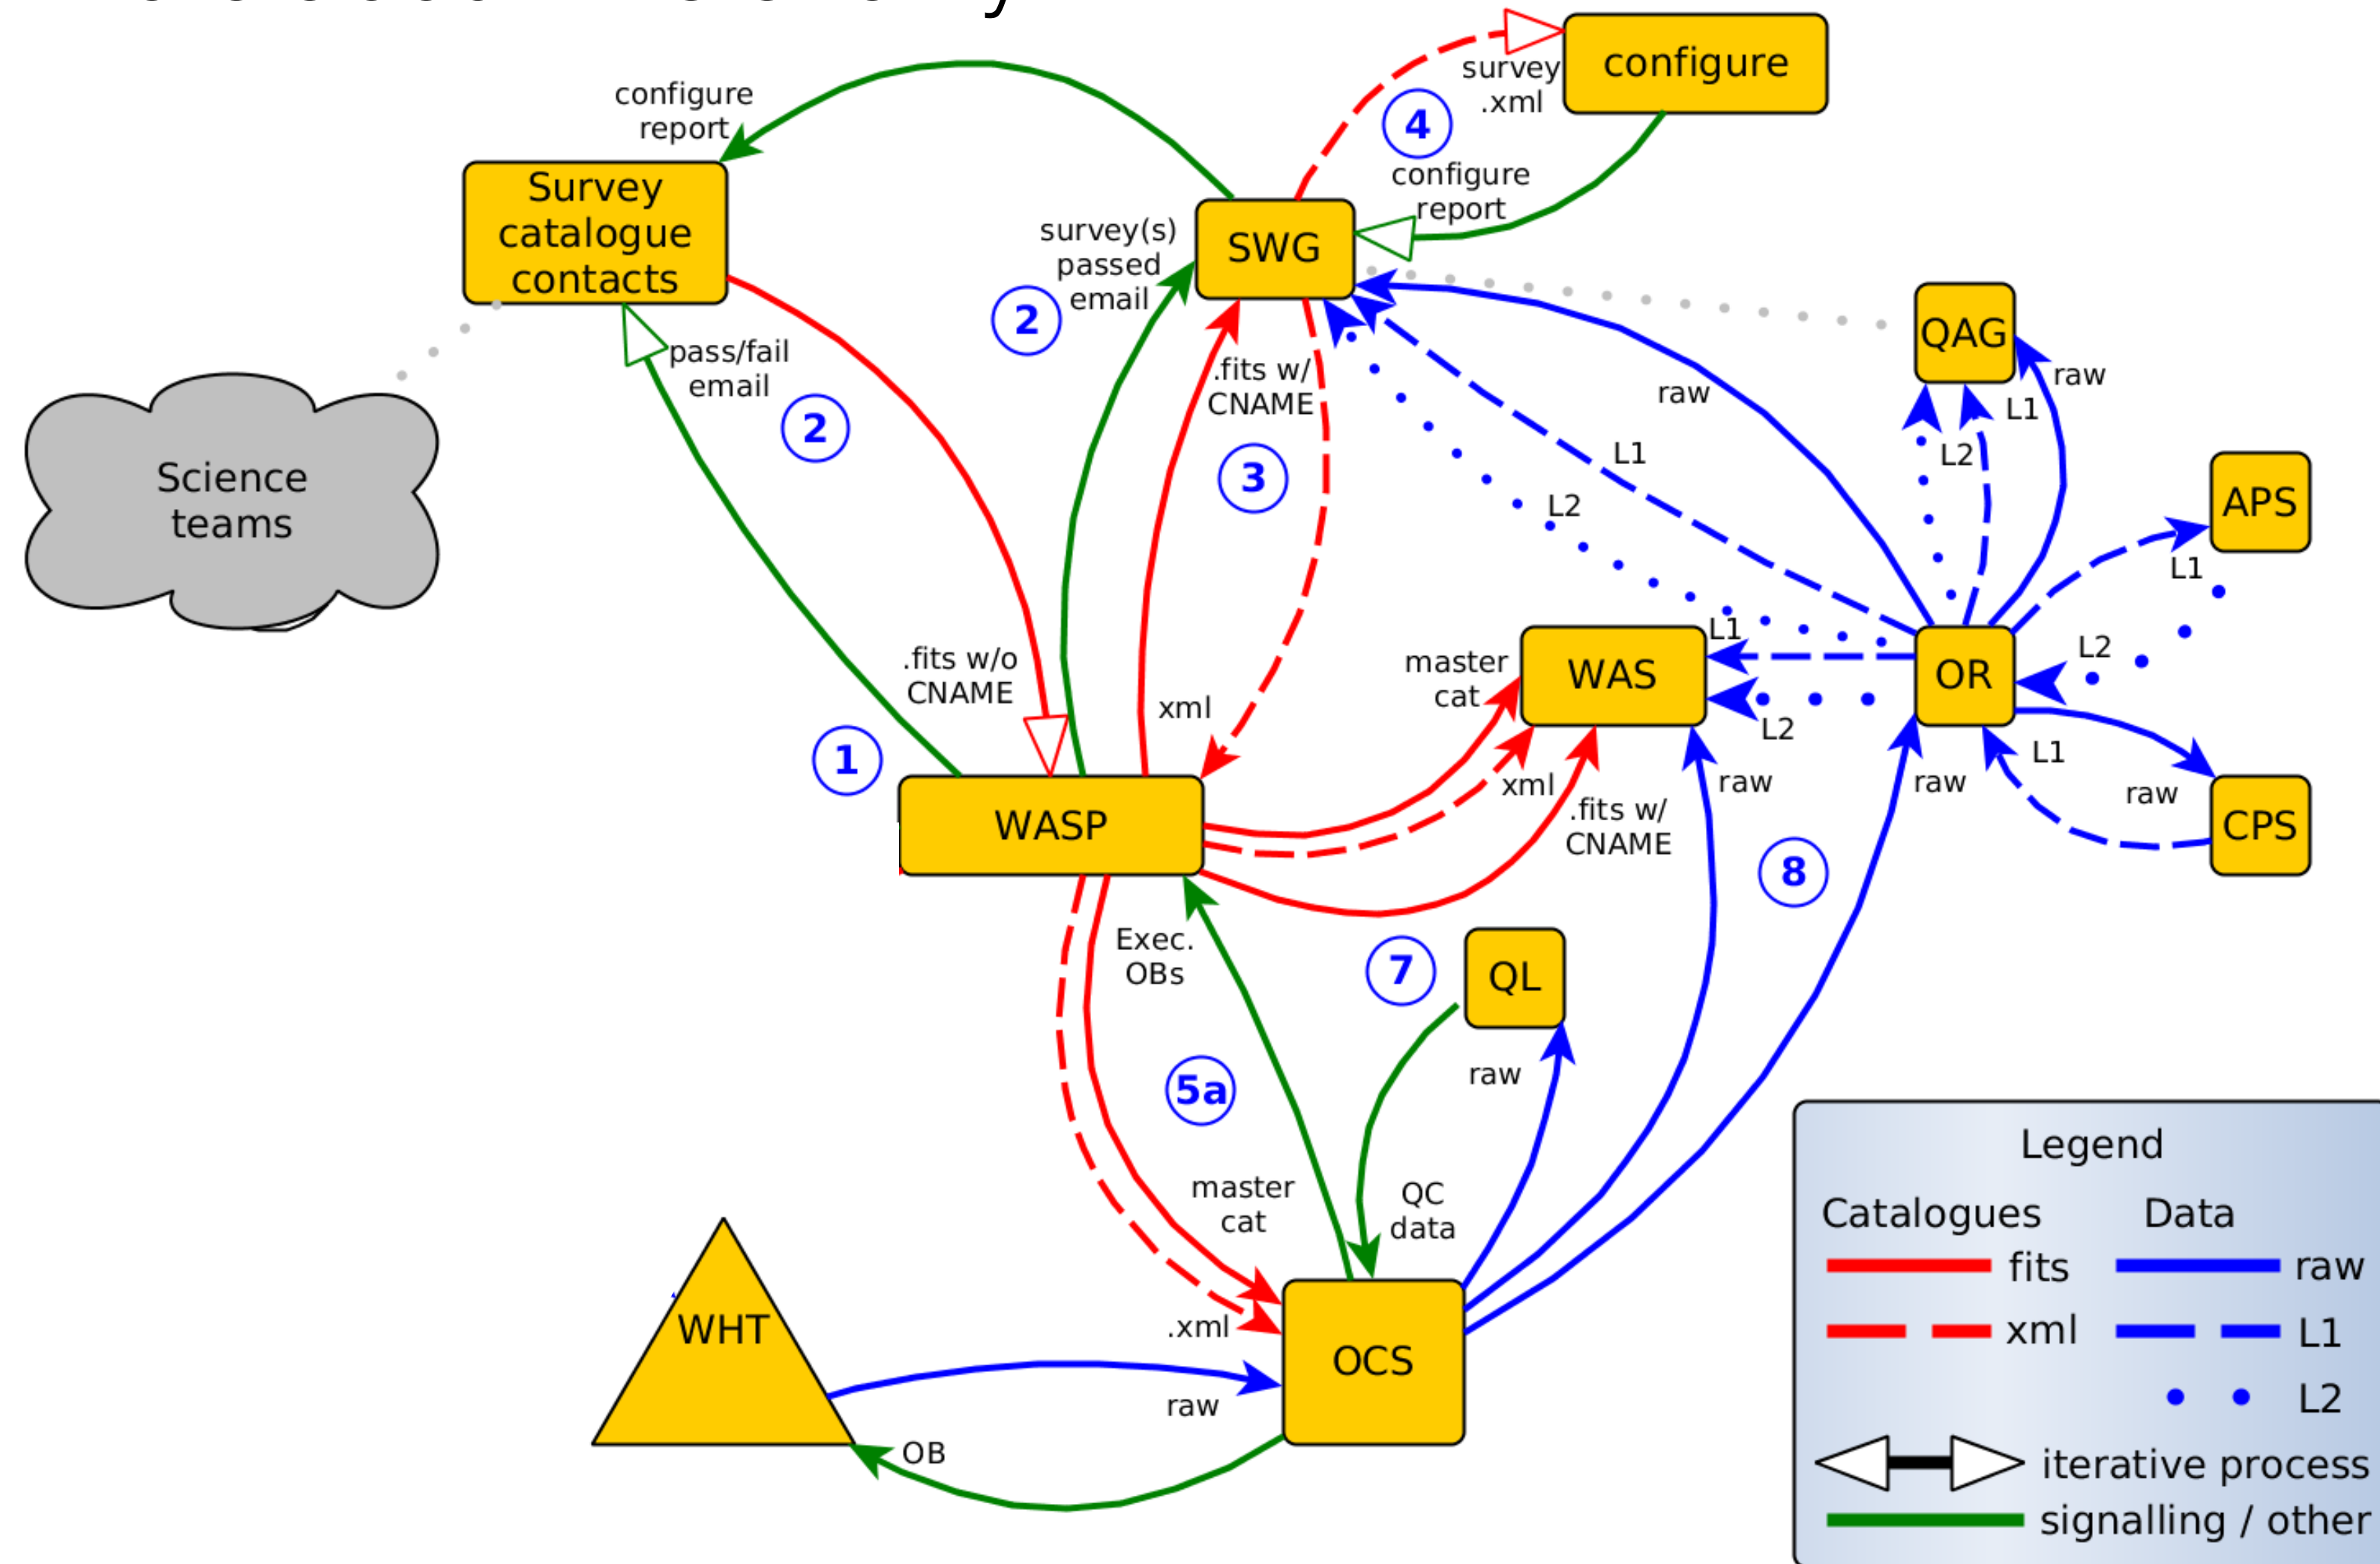

# WEAVE characteristics

Telescope, diameter	WHT, 4.2m
Field of view	2° $\emptyset$
Number of fibers	960 (plate A)/940 (plate B)
Fiber size	1.3''
Number of small IFUs, size	20 x 11''x12'' (1.3'' spaxels)
LIFU size	1.3'x1.5' (2.6'' spaxels)
Low-resolution mode resolution	5750 (3000–7500)
Low-resolution mode wavelength coverage (Å)	3660–9590
High-resolution mode resolution	21000 (13000–25000)
High-resolution mode wavelength coverage (Å)	4040–4650, 4730–5450 5950–6850

# WEAVE data flow: a schematic

David will say more about this shortly!

# WEAVE data flow

- ✦ Most important points for you (more details later):
  - ✦ **OBs**: observing blocks, based on XML generated from your **FITS catalogues**
  - ✦ **CPS**: Core Processing System — reduces raw data into 1D (sky subtracted, fluxed) spectra
  - ✦ **APS**: Advanced Processing System — turns 1D spectra into **data cubes** (for IFU data) and **science-ready data products**

# WEAVE data flow

- ✦ Most important points for you (more details later):
  - ✦ **WAS**: the WEAVE Archive System — how you will access the data
  - ✦ **PLEASE NOTE**: you can **only** publish data that has come from the WAS!

# The WEAVE Primary Science Surveys

- Galactic Archaeology (STL: V. Hill, OCA)
  - including: LR-halo, LR-disc, HR, Open Cluster surveys
- Stellar, Circumstellar, and Interstellar Physics (STL: J. Drew, UCL)
- White Dwarfs (STL: B. Gänsicke, Warwick)
- Galaxy Clusters (STL: J. A. Aguerri, IAC)
- WEAVE-Apertif (STL: J. Falcón Barroso, IAC)
- StePS (STL: A. Iovino, Milano)
- WEAVE-LOFAR (STL: D. Smith, Herts)
- WEAVE-QSO (STL: M. Pieri, LAM)
